1.INTRODUCTION

This movie ticket booking system project is an example of our group's commitment to completely transform how audiences buy tickets and theater managers handle seat reservations. Providing a seamless and effective platform for this procedure is essential in the current digital era.

The goals, successes, and potential outcomes of our initiative are described in this report.

2.ABSTRACT

The Movie Ticket Booking System is a comprehensive software program created to simplify and improve the experience of going to the movies for patrons and theater staff. The system responds to the growing need for online ticket purchasing in the digital age by giving consumers a quick and easy way to browse, choose, and purchase movie tickets while giving administrators the ability to manage seat reservations and movie databases with ease.

The primary features, goals, functional and non-functional requirements, tools used in its design and development, and an in-depth study of the movie ticket booking system are all included in this paper. In order to shed light on the project's development, we will also talk about the initial plan in comparison to the actual implementation. The report also highlights the contributions made by each member, the difficulties encountered during development, and the important lessons the project team gained.

Customers and theater administrators are the two main user roles that the movie ticket booking system serves. Customers can log in to browse movie genres, view movies, watch trailers, and get comprehensive movie information before reserving and paying securely. On the other side, administrators have the power to control seat bookings, update the movie database, manage user accounts, and produce in-depth reports.

The architecture of the system ensures seamless communication between users, administrators, and the database, ensuring the dependability, correctness, and security of the data. Additionally, the addition of a payment procedure improves the user experience by enabling users to go easily from choosing their favorite seats to processing safe online payments.

The Movie Ticket Booking System marks a significant advancement in the modernization of the film business by delivering moviegoers a user-friendly, effective, and convenient platform and giving theater managers strong management tools. The technology is ready to meet the changing needs of moviegoers because to its adaptability and possibility for future improvements.

3.PROBLEM DEFINITION

Moviegoers frequently experience substantial hassles and inefficiencies in the present system for booking movie tickets, while theater operators struggle with operational issues. Long lines, a lack of information about seat availability, and a laborious manual booking process all burdens for moviegoers. Theater managers struggle to properly manage ticket reservations, frequently using manual tracking techniques.

Our system for purchasing movie tickets attempts to address these urgent problems by giving moviegoers a streamlined, user-friendly, and effective platform for purchasing tickets. Additionally, it gives theater managers the tools they need to efficiently handle reservations for seats and streamline theater operations. The system also aims to improve the movie-watching experience by providing viewers with access to in-depth movie information and trailers on a single practical platform.

By addressing these issues, our initiative seeks to improve the ease of use for users and manageability for theater staff while purchasing movie tickets, ultimately reviving the movie industry's approach to ticket sales.

4.OBJECTIVES

- ✓ To develop a user-centered platform that makes it simple for users to purchase movie tickets.
- ✓ Minimize manual work and streamline seat booking and management for theater managers.
- ✓ To improve the experience of watching movies by offering comprehensive movie information and trailers.

5.FUNCTIONAL AND NON-FUNCTIONAL REQUIREMENTS

5.1. FUNCTIONAL REQUIREMENTS

- ✓ User registration and login
- ✓ Simple system for choosing and booking seats.
- ✓ Dynamic movie category selection
- ✓ Real-time movie details retrieval from a centralized database.

5.2.NON-FUNCTIONAL REQUIREMENTS

- ✓ System with high performance to manage peak load periods.
- ✓ Strong security procedures to safeguard user information.
- ✓ The capacity to scale to meet an increasing user base.
- ✓ [scalability]
- ✓ A user-friendly and aesthetically pleasing interface for an enhanced user experienced

6.DESIGN OF THE SYSTEM

6.1.USE CASE DIAGRAM

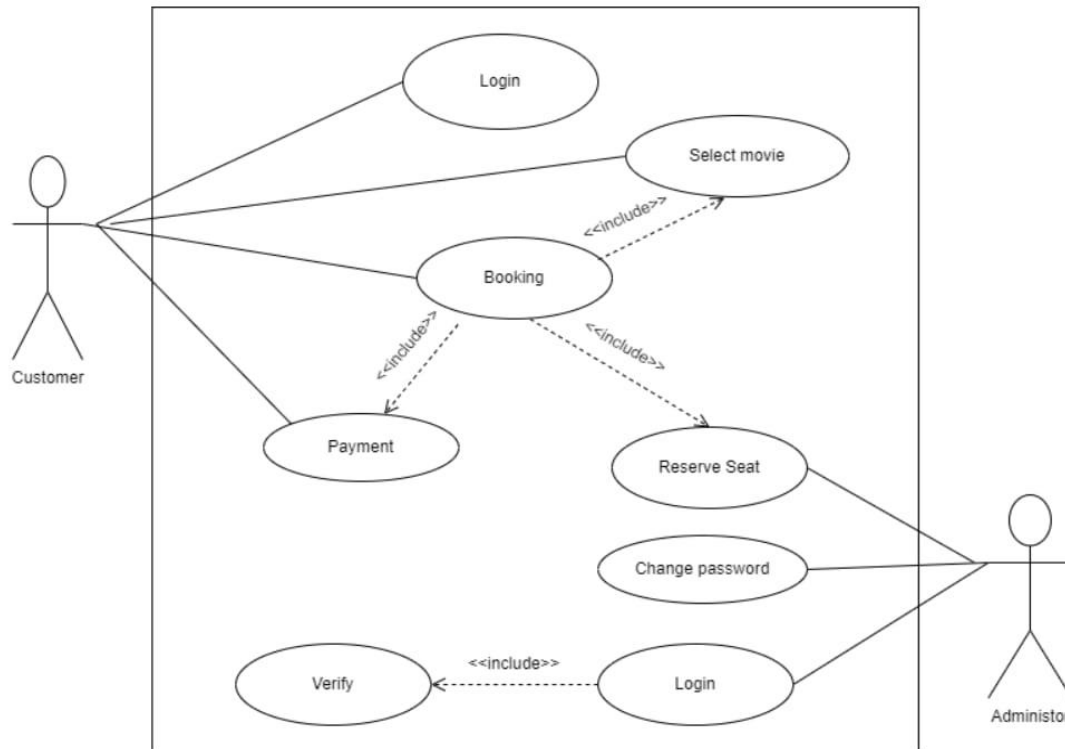

FIGURE 1:USE CASE DIAGRAM

6.2. Class Diagram

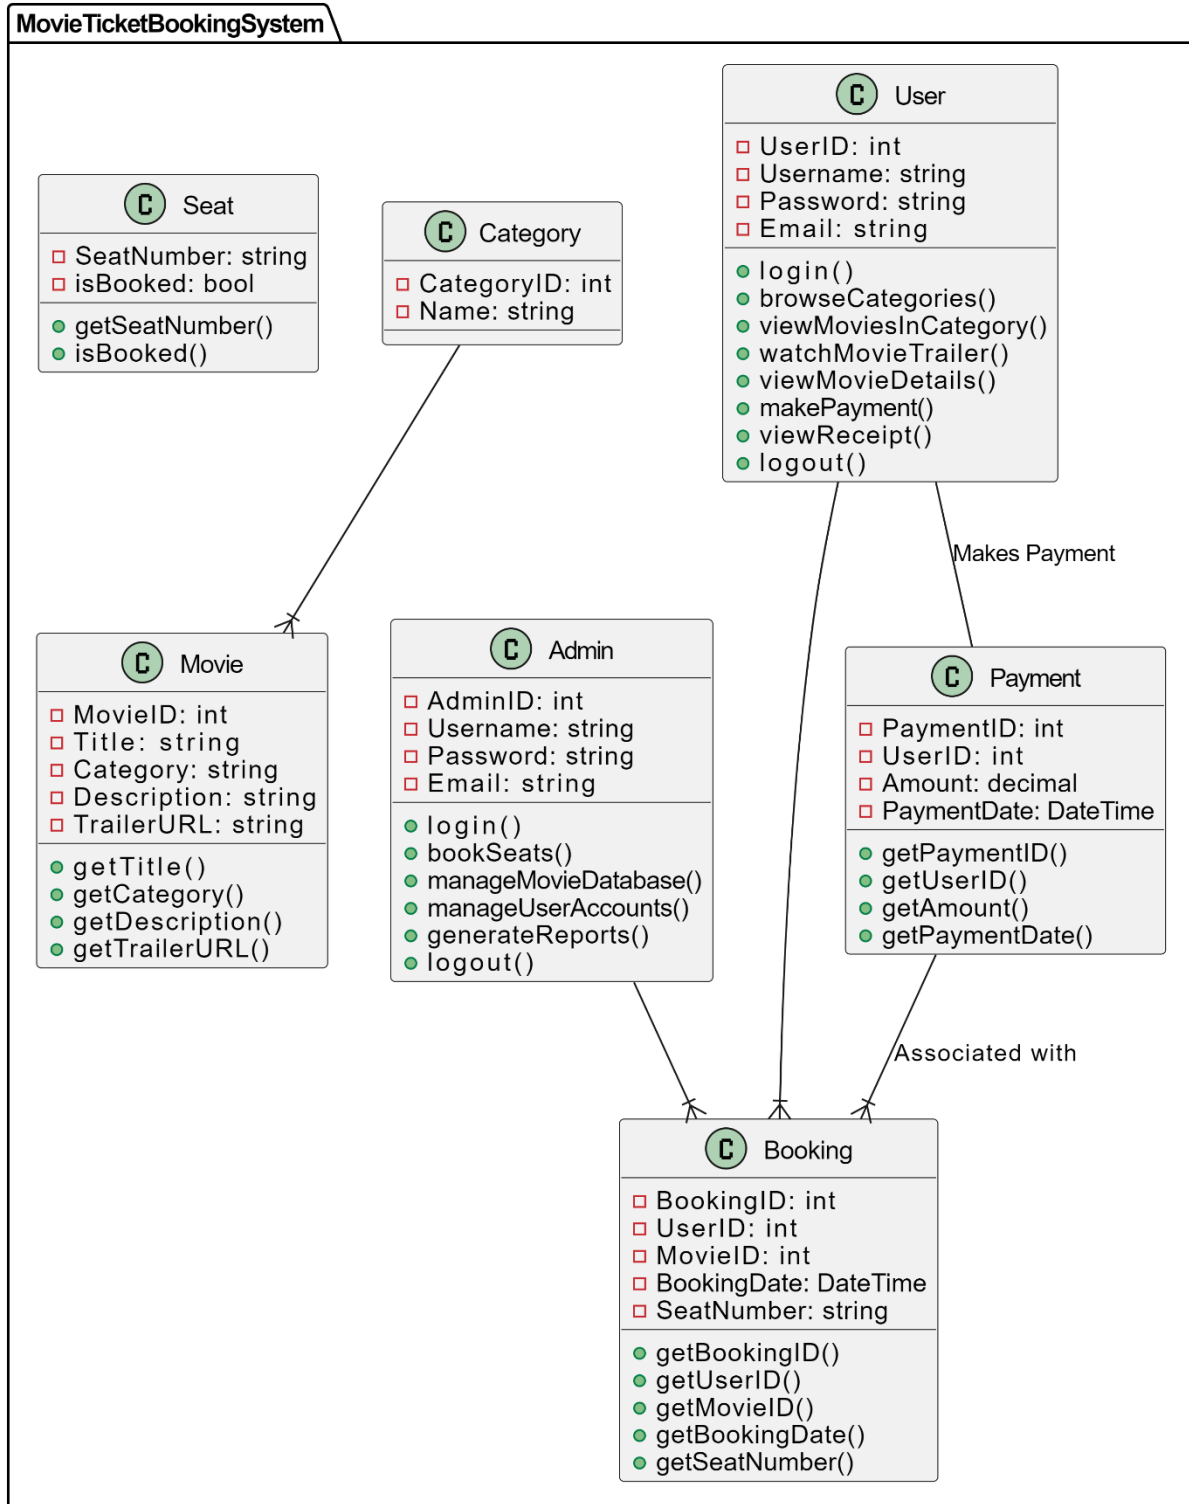

FIGURE 2: CLASS DIAGRAM

6.3. SEQUENCE DIAGRAM

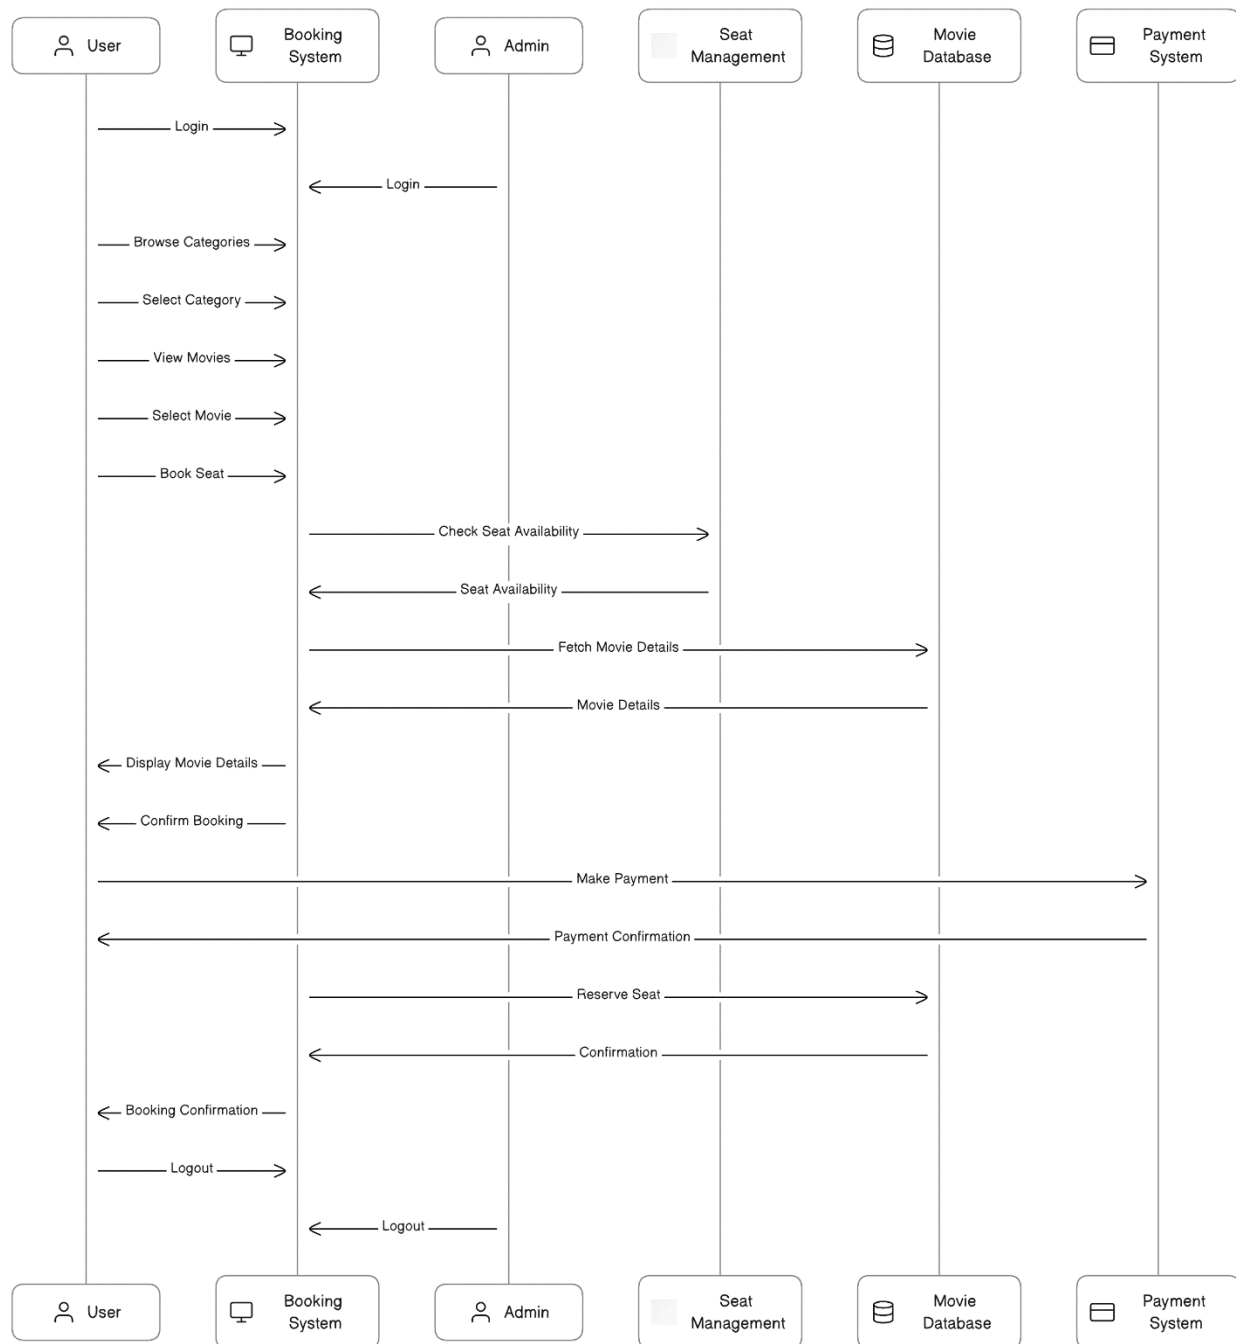

FIGURE 3:SEQUENCE DIAGRAM

6.4.ER DIAGRAM

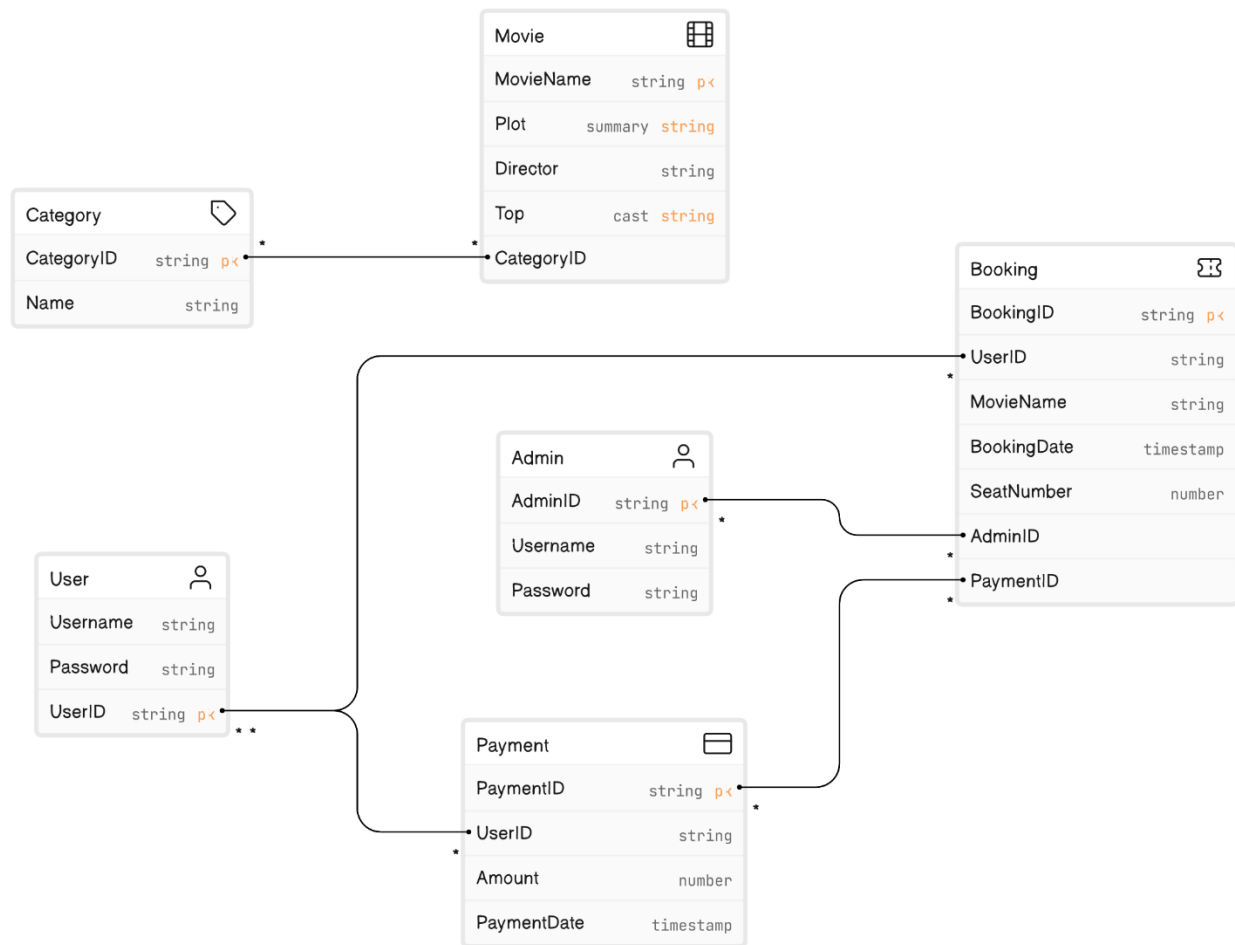

FIGURE 4:ER DIAGRAM

6.5. DATABASE DESIGN

6.5.1. ENTITIES AND THEIR ATTRIBUTES

1.movie details table:

- Movie name
- Plot summary
- Director
- Top cast

2.ticket details table:

- Id
- Name
- Contact number.
- Email

- Select date
- Selected date
- Selected time
- Movie name
- Ticket price
- Quantity
- Total price

6.5.2. DATABASE RELATIONSHIPS

- User (Customer) and Admin have a one-to-many relationship with Booking (users can make multiple bookings, admins can create bookings on behalf of customers).
- Category has a one-to-many relationship with Movie (one category can have multiple movies).
- User and Payment have a one-to-many relationship (a user can make multiple payments).
- Booking and Payment have a one-to-one or one-to-many relationship, depending on your design (a booking can have one or multiple associated payments).

6.5.3. CONSIDERATION

- Implement data validation to ensure data integrity, checking for distinct usernames and legitimate email addresses, among other things.
- Security: Use salting and hashing methods to store passwords safely. Safeguard private information, such as user and payment details.
- Normalization: To reduce data redundancy and boost productivity, make sure the database is appropriately normalized.
- To ensure the atomicity and consistency of processes, particularly while processing payments, use database transactions.
- Backup and recovery: Create regular database backups to guard against data loss and put recovery processes in place.
- Test the database design carefully to make sure it adheres to the specifications and performs as intended.
- Consider future scalability requirements as your system may need to grow.

7. TOOLS USED IN DESIGN AND DEVELOPMENT

1. **Visual studio:** for application development
2. **SQL server:** for database management
3. **C# programming language:** for application logic
4. **.NET:** for web development

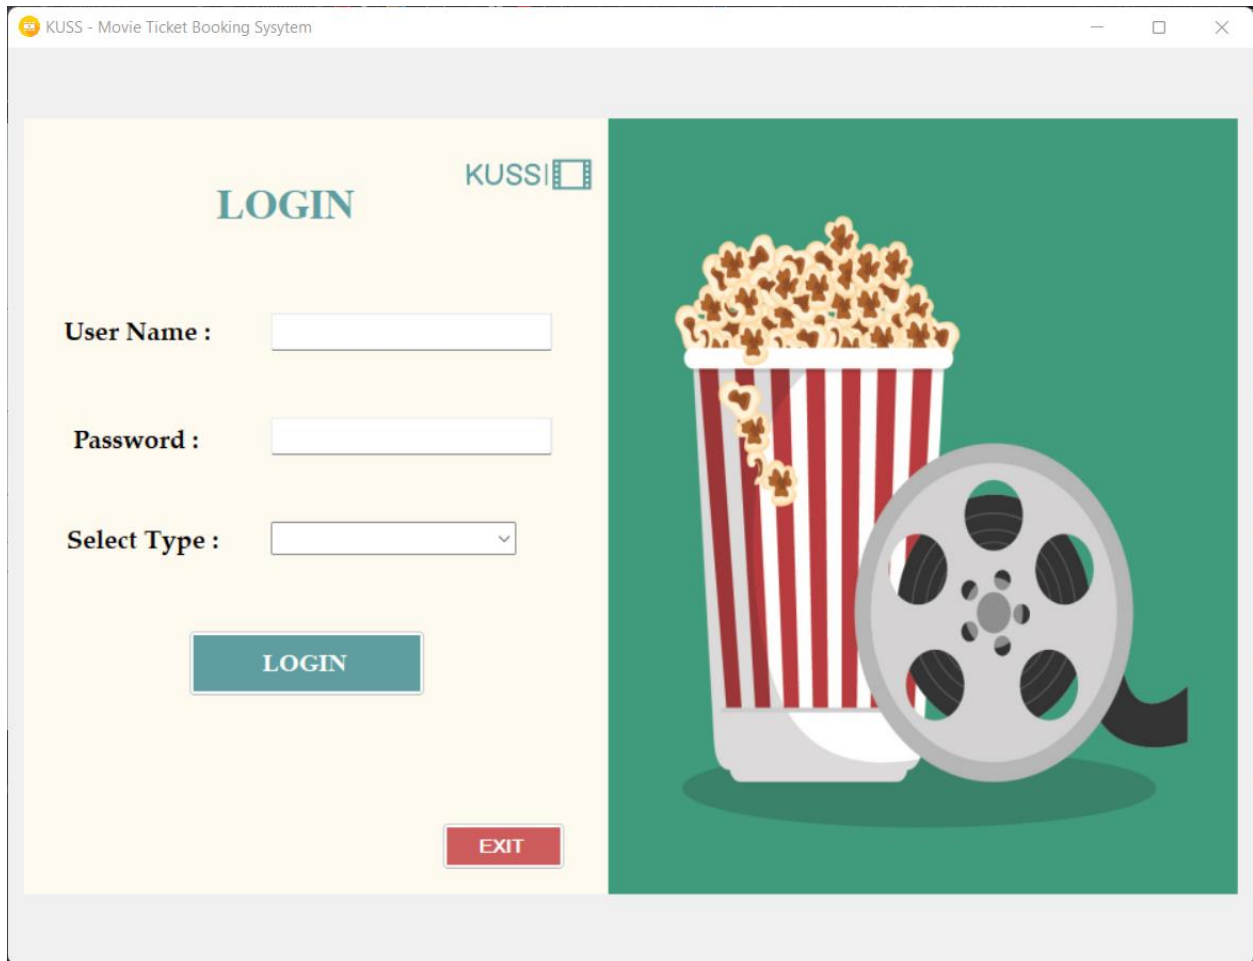

8. INITIAL PLAN VS ACTUAL PLAN

Our project closely followed the original plan, with a few tactical changes based on changing requirements and best practices in the industry.

Improvements to the user interface, the addition of new features, and the refinement of testing procedures were the main areas where the original plan was altered in response to changing project requirements and the dynamic nature of software development.

9. DESIGN OF EACH FORMS

Login Form

The screenshot displays a web application window titled "KUSS - Movie Ticket Booking Sysytem". The login form is located on the left side of the window, set against a light yellow background. It features the word "LOGIN" in large, bold, teal letters at the top. Below this, there are three input fields: "User Name :", "Password :", and "Select Type :". The "Select Type :" field is a dropdown menu. A teal "LOGIN" button is positioned below the input fields. At the bottom right of the form area, there is a red "EXIT" button. To the right of the form, there is a large green rectangular area containing a stylized illustration of a red and white striped popcorn bucket overflowing with popcorn, and a silver film reel with a black film strip.

Customer details

The screenshot shows a web browser window with the title 'Customer'. The main content area has a teal background and is titled 'Customer Details' in white text. In the top right corner, there is a yellow box containing the text 'KUSSI' and a small icon of a film strip. Below the title, there are two input fields. The first is labeled 'Customer ID and Seats No' with the example '(xxxx - 2,3)' and is currently empty. The second is labeled 'Customer No' and is also empty. At the bottom center, there is a large yellow button labeled 'Accept'. In the bottom right corner, there is a red button labeled 'Exit'.

11.WORK CONTRIBUTION TABLE

Team member	Role and responsibilities
PS/2019/052	Database setup and managment,Testing and debugging,Payment form,Customer details form UI design.
PS/2019/124	Documentation and Reporting,testing and debugging,UI design of movie category forms
PS/2019/127[Team leader]	Database setup and managent,Data Integration and logic,Testing and debugging,Main login form,seat booking form ,Reciept form UI design
PS/2019/192	Documentation and Reporting,testing and debugging,UI design of ticket booking form and movie details forms.

Challenges faced	Lessons learned
Database connectivity complexities	Importance of rigorous testing
UI/UX refinements	Iterative development is key
Scope creep and time constraints	Effective communication is vital
Identifying and fixing bugs	Continuous improvement

12. FUTURE ENHANCEMENT

- Integration with well-known online payment processors to ensure smooth transactions.
- Enhanced user profiles, preferences, and suggestions that are especially for you.
- Integration with social media sites to promote discussion and movie sharing.
- creation of a specific mobile application for easy smartphone ticket buying.
- updates on seat availability in real-time and an interactive seating diagram.

13. CONCLUSION

In conclusion, our project to develop a system for purchasing cinema tickets has accomplished its goals and successfully solved the difficulties that were raised. The technology aims to improve both the user and theater administrators' efficiency when it comes to purchasing movie tickets. We will surely use the knowledge gained from this initiative to direct our future work as we continue to innovate and improve the system.
